EDUCATION

Oct 2021 - Present

POSTS AND TELECOMMUNICATIONS INSTITUTE OF TECHNOLOGY (PTIT)

- Software Engineering

SKILLS

- Languages: C# (primary), Java, Python
- Back-end: ASP.NET Core, EF Core, RESTful APIs, JWT, Layered Architecture
- Database: SQL Server, PostgreSQL, MySQL
- Cloud & Deployment: Azure, Render, Vercel, Cloudflare
- Tools: Docker, Git/GitHub, Postman, n8n
- Front-end: React, React Native

LANGUAGES

- Vietnamese: Native
- English: Intermediate (Technical Reading & Communication)

PROFILE SUMMARY

Full-Stack Developer with 9 months of internship experience developing and maintaining RESTful APIs at S3WORK. Strong foundation in C#, SQL Server, Entity Framework Core, and layered architecture, with practical experience in building modern UIs using React and React Native. Seeking a Fresher Full-Stack role to leverage my end-to-end development skills, contribute to real-world products, and continually learn new technologies.

EXPERIENCE

ASP.NET Core Back-end Intern | S3WORK

Ho Chi Minh City | 01/2025 – 09/2025

- Contributed to a production retail system by refactoring legacy ASP.NET modules and improving front-end usability.
- Assisted in maintaining RESTful APIs using ASP.NET Core and Entity Framework Core, helping ensure data integrity for retail operations.
- Collaborated with senior developers through Git workflows and code reviews while following industry-standard coding practices.

PROJECTS

Wealth Management Platform

Personal Project | Live App | Source Code

- Designed a cloud-deployed investment tracking system with secure per-user data isolation and JWT authentication.
- Implemented financial calculations including realized/unrealized PnL and weighted average cost.
- Engineered a decoupled architecture using an ASP.NET Core API, React/Vite, and Azure SQL.
- Deployed the backend on Render and the frontend on Vercel, with Azure SQL and Cloudflare; used Docker for local development.

Smart Library System (AI-powered)

Graduation Project | Source Code

- Handled end-to-end database requirements analysis and PostgreSQL schema design for library operations.
- Developed ASP.NET Core APIs and the React staff/admin web application using Repository Pattern, Dependency Injection, and JWT authentication.
- Built the React Native reader app and resolved defects in selected customer-facing backend modules.
- Tested the RAG-based AI Agent using n8n, Gemini, and Pinecone.

Supply Management System (Distributed Database)

Academic Project | Source Code

- Engineered a multi-branch inventory management system using a distributed SQL Server database architecture.
- Implemented horizontal fragmentation and RBAC for branch-level data isolation.
- Optimized reporting and cross-branch operations using secure stored procedures.
