EDUCATION

Oct 2021 - Now

POSTS AND
TELECOMMUNICATIONS
INSTITUTE OF TECHNOLOGY (PTIT)

- Software Engineering

SKILLS

- Languages: C# (primary), Java, Python
- Back-end: ASP.NET Core, EF Core, RESTful APIs, JWT, Clean Architecture
- Database: SQL Server, PostgreSQL, MySQL
- Cloud & DevOps: Docker, Azure, Render, Vercel, Cloudflare
- Tools & Integrations: Git/GitHub, Postman, n8n, React

LANGUAGES

- Vietnamese: Native
- English: Intermediate (Technical Reading & Communication)

PROFILE SUMMARY

Back-end Developer with 6 months of internship experience building RESTful APIs using ASP.NET Core at S3WORK. Strong foundation in C#, SQL Server, EF Core, and clean architecture. Seeking a junior .NET backend role to contribute to scalable, real-world systems.

EXPERIENCE

ASP.NET Core Back-end Intern | S3WORK

Ho Chi Minh City | March 2025 - August 2025

- Contributed to a production-scale e-commerce platform by refactoring legacy ASP.NET functions and enhancing front-end UI/UX.
- Assisted in maintaining RESTful APIs using ASP.NET Core and Entity Framework Core, ensuring data integrity for retail operations.
- Collaborated with senior developers through Git workflows and code review processes, adhering to industry standard coding practices.

PROJECTS

Wealth Management Platform | [Production](#) | [Source Code](#)

- Designed a cloud-native investment tracking system with multi-tenant data isolation and JWT-based authentication.
- Implemented complex financial logic for real-time portfolio analysis (realized/unrealized PnL, weighted average cost).
- Engineered a decoupled architecture using ASP.NET Core API (Render), React/Vite (Vercel), and Azure SQL.
- Streamlined deployment using Docker Compose and managed secure routing via Cloudflare.

Smart Library System (AI-powered) | [Source Code](#)

- Developed a cross-platform library ecosystem with a ReactJS Admin Web and React/React Native apps for readers.
- Architected an ASP.NET Core REST API utilizing the Repository Pattern, Dependency Injection, and JWT.
- Integrated an AI Agent via n8n, Gemini, and Pinecone Vector DB, applying RAG for semantic search and Q&A.
- Designed a PostgreSQL database to manage traditional borrowing/return workflows and statistics.

Supply Management System (Distributed Database) | [Source Code](#)

- Engineered a multi-branch desktop application for inventory import/export workflows with strict business validation.
- Applied distributed database design via horizontal fragmentation across SQL Servers for branch-level data isolation.
- Implemented RBAC allowing aggregated data views for company admins and isolated control for branch managers.
- Optimized data processing, dynamic reporting, and cross-branch operations using secure stored procedures.
